DATE PERFORMED:	August 8 2026	DATE SUBMITTED:	August 8 2026
NAME:	Mendoza, Roy Gabriel I.	INSTRUCTOR:	Engr. Jimlord Quejado

ACTIVITY NO. 4	Hands-on Activity 4 Data Analytics Career
-----------------------	--

1. PROCEDURE OUTPUT

What procedures did you perform?

4.1.5 Practice Item - Job Market

Getting hired as a data analyst is the first step in your data analytics career.

Research career paths in data analytics on internet job sites, such as indeed.com, DataJobs.com, and LinkedIn.com. Then write in the box below one or more paths that fit your interests. After you Submit your answer, you can select Show model answer to review some common data professional career path examples.

The screenshot shows a web browser with two tabs. The left tab displays a user profile for 'ROY GABRIEL MENDOZA' on a platform called 'T.I.P. INSTRUCTURE'. The profile includes a profile picture, name, and a biography. The right tab shows a '4.1.5 Practice Item - Job Market' on a Cisco Networking Academy page. The practice item contains a text box with a user's response and a 'Show model answer' button. The user's response discusses career paths in Business Intelligence and Machine Learning. The interface includes a sidebar with course progress and a top navigation bar.

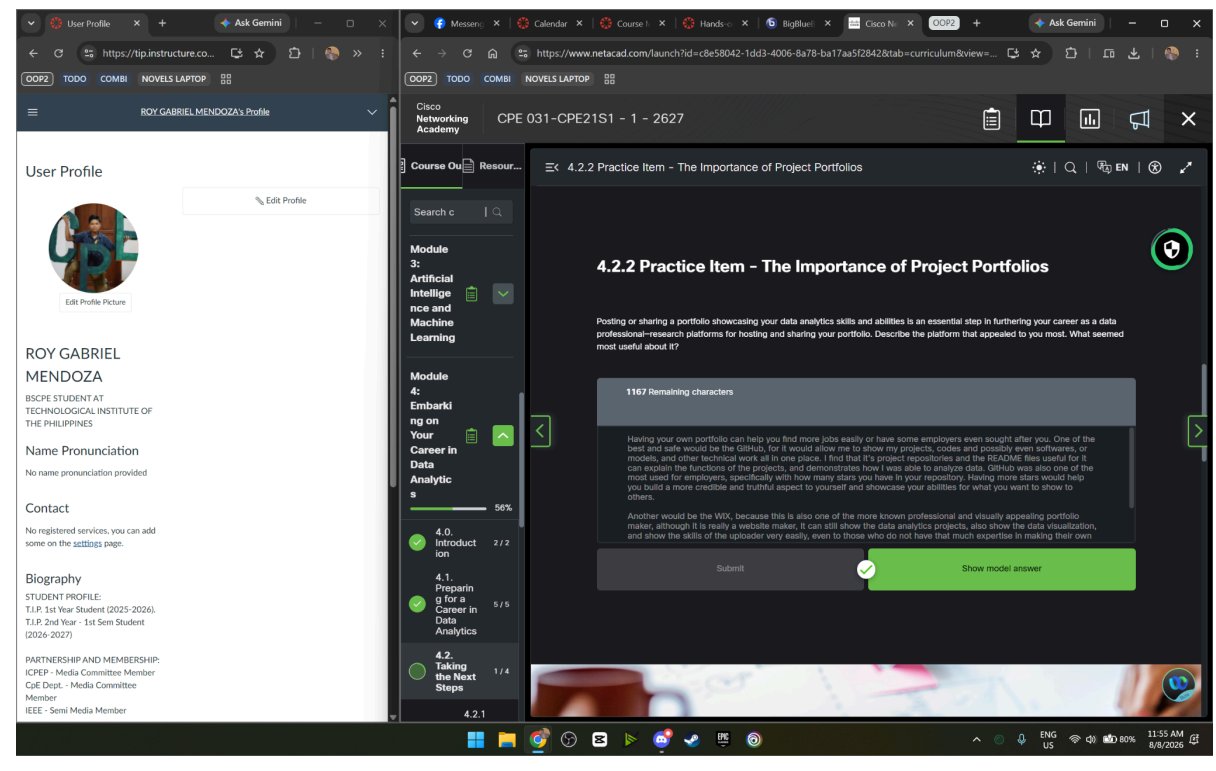

TEXT ITSELF:

One of the path that I found interesting that align with my interest would be the Business Intelligence. This job or path would start at as a Junior Analyst, preferably starting at Junior Business Intelligence Analyst directly, because in this start, I would be able to learn how to collect, clean, analyze and visualize the business data. Since this involved money, I would be able to comprehend this more easily. Once I have the foundations and connections, the promotion to a normal employee to a Senior or Even a Manager, would not be just a pipedream. This path interest me because it combines data analysis, technology, business related stuff, and of course money.

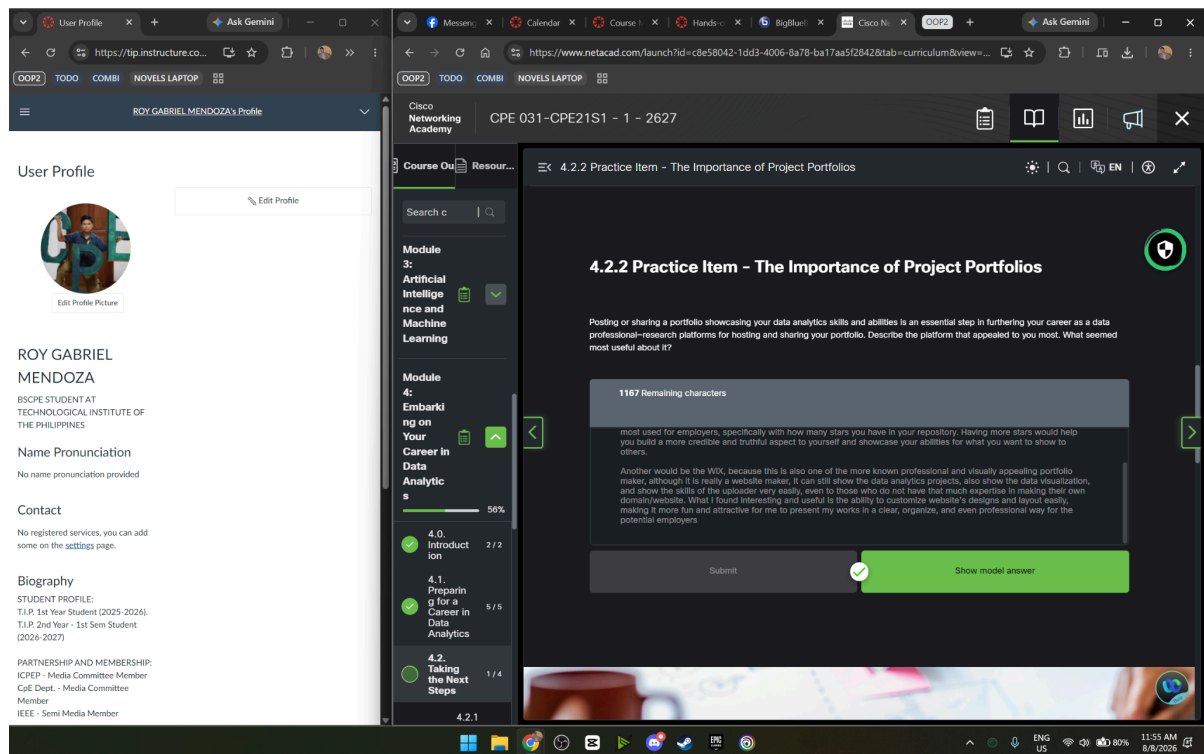

Another would be the Machine Learning. I could start as a Junior Machine Learning Engineer or a Machine Learning Analyst, where I can also develop the skills in programming and building a Machine Learning models. With the experience gain, I would be able to create even my own startup for machine learning models that would focus on preferably business models or to advertisement models for it is one of the sought after models for this kind of focus.

4.2.2 Practice Item - The Importance of Project Portfolios

Posting or sharing a portfolio showcasing your data analytics skills and abilities is an essential step in furthering your career as a data professional—research platforms for hosting and sharing your portfolio. Describe the platform that appealed to you most. What seemed most useful about it?

The screenshot displays a web browser with two main windows. The left window shows a user profile for ROY GABRIEL MENDOZA, a BSCPE student at the Technological Institute of the Philippines. The profile includes a name pronunciation section, contact information, and a biography. The right window shows a practice item titled "4.2.2 Practice Item - The Importance of Project Portfolios" from the Cisco Networking Academy. The practice item includes a text area for the user's response, a character count (1167 remaining), and a "Show model answer" button. The interface also features a sidebar with course navigation and a top navigation bar with various icons.

TEXT ITSELF:

Having your own portfolio can help you find more jobs easily or have some employers even sought after you. One of the best and safe would be the GitHub, for it would allow me to show my projects, codes and possibly even softwares, or models, and other technical work all in one place. I find that it's project repositories and the README files useful for it can explain the functions of the projects, and demonstrates how I was able to analyze data. GitHub was also one of the most used for employers, specifically with how many stars you have in your repository. Having more stars would help you build a more credible and truthful aspect to yourself and showcase your abilities for what you want to show to others.

Another would be the WIX, because this is also one of the more known professional and visually appealing portfolio maker, although it is really a website maker, It can still show the data analytics projects, also show the data visualization, and show the skills of the uploader very easily, even to those who do not have that much expertise in making their own domain/website. What I found interesting and useful is the ability to customize website's designs and layout easily, making it more fun and attractive for me to present my works in a clear, organize, and even professional way for the potential employers

CONCLUSION

In creating this activity, I was able to identify the other possible Data Analysis Jobs focusing on other aspects not just data. I also was able to found some interesting websites even a great people who create their portfolio like a

game itself, not the formal kind, the one that would require imagination and great skills. Overall, this activity I think is made for us to prepare us for the creation of our own websites for the job application and to show our skills for the future employers, not just the resume, but the skills itself.

2. ANSWERS TO SUPPLEMENTAL ACTIVITY

N/A

3. ARTIFICIAL INTELLIGENCE (AI) USE DISCLOSURE STATEMENT

I hereby declare that artificial intelligence (AI) tools were used, if applicable, in the preparation of this academic work. The following indicates the nature and extent of AI assistance:

Tools Used: None

Examples: ChatGPT, Microsoft Copilot, Grammarly, QuillBot, etc.

Purpose of Use: None

Examples: grammar correction, idea generation, formatting, summarization, code assistance, explanation of concepts, etc.

Extent of Use: None

Explain how AI was used and confirm that it did not replace original thinking, analysis, authorship, or completion of the required work.

By submitting this activity, I affirm that my use of AI complies with T.I.P.'s AI usage policy and does not exceed the permitted limits for similarity, automated content generation, or academic assistance.

I understand that any false, incomplete, or misleading disclosure may be subject to investigation in accordance with due process and may result in sanctions for violation of existing T.I.P. policies.
