One of the path that I found interesting that align with my interest would be the Business Intelligence. This job or path would start at as a Junior Analyst, preferably starting at Junior Business Intelligence Analyst directly, because in this start, I would be able to learn how to collect, clean, analyze and visualize the business data. Since this involved money, I would be able to comprehend this more easily. Once I have the foundations and connections, the promotion to a normal employee to a Senior or Even a Manager, would not be just a pipedream. This path interest me because it combines data analysis, technology, business related stuff, and of course money.

Another would be the Machine Learning. I could start as a Junior Machine Learning Engineer or a Machine Learning Analyst, where I can also develop the skills in programming and building a Machine Learning models. With the experience gain, I would be able to create even my own startup for machine learning models that would focus on preferably business models or to advertisement models for it is one of the sought after models for this kind of focus.

## 4.2.2 Practice Item - The Importance of Project Portfolios

Posting or sharing a portfolio showcasing your data analytics skills and abilities is an essential step in furthering your career as a data professional—research platforms for hosting and sharing your portfolio. Describe the platform that appealed to you most. What seemed most useful about it?

The screenshot shows a web browser with two tabs. The left tab is titled "User Profile" and shows the profile of "ROY GABRIEL MENDOZA", a BSCPE student at the Technological Institute of the Philippines. The right tab is titled "4.2.2 Practice Item - The Importance of Project Portfolios" and displays a text input area with a character count of 1167. The text entered in the input area is: "Having your own portfolio can help you find more jobs easily or have some employers even sought after you. One of the best and safe would be the GitHub, for it would allow me to show my projects, codes and possibly even softwares, or models, and other technical work all in one place. I find that it's project repositories and the README files useful for it can explain the functions of the projects, and demonstrates how I was able to analyze data. GitHub was also one of the most used for employers, specifically with how many stars you have in your repository. Having more stars would help you build a more credible and truthful aspect to yourself and showcase your abilities for what you want to show to others. Another would be the Wix, because this is also one of the more known professional and visually appealing portfolio maker, although it is really a website maker, it can still show the data analytics projects, also show the data visualization, and show the skills of the uploader very easily, even to those who do not have that much expertise in making their own." Below the input area are "Submit" and "Show model answer" buttons. The browser's address bar shows the URL "https://www.netacad.com/launch?id=c8e58042-1dd3-4006-8a78-ba17aa5f2842&tab=curriculum&view=...".

The screenshot displays a web browser with two main windows. The left window shows a user profile for ROY GABRIEL MENDOZA, a BSCE student at the Technological Institute of the Philippines. The right window shows a practice item titled "4.2.2 Practice Item - The Importance of Project Portfolios" from Cisco Networking Academy. The practice item includes a text area with 1167 remaining characters and a "Show model answer" button.
